

Java: Features and Real-World Applications

Name: Megha Shinde

Course: B.Tech Information Technology

Subject: Java Assignment

Date: 26/07/2026

Java And its history:

Java is high level ,object-oriented programming language developed by James Gosling and his team at Sun Microsystems in 1995;

It was designed with principle "Write once, run anywhere (WORA)".

Java is one of the most popular programming languages because it is reliable, secure, easy to learn and platform independent.

Features of Java:

1. platform independent: Run on any platform.
2. object-oriented: It supports the OOP concepts like class, object, inheritance, abstraction, polymorphism and encapsulation.
3. secure: Java provides the built-in security features.
4. portable: It can change program from one system to another without changing the code.
5. simple: Java has clean syntax and removes complex features.
6. multithreading
7. High performance

Real world applications of Java:

1. Web development
2. Android app development
3. Desktop applications
4. Enterprise applications
5. cloud computing
